SUBJECT: Change to BOS Toehold

The toehold sequence to re-enter BOS has been moved from location 0 to location 6.
Therefore, in all instances where BOS is to be entered through the switches by
an XED 0, the instruction

          XED   6

should be used instead. (The octal code for XED 6 is 000006717200.) This
change becomes effective with the installation of BOS 1.9.
