IdentificationTD_GETFILE
D. L. Stone

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

Function of Entry:

To initiate and ascertain the length of a segment, given the path or entry name.

Calling Sequence for Entry:

```
call td_getfile (filename, dir, fileptr, bit_length,  
                error);
```

Declaration of Arguments:

```
decl filename char(*),          /* entry name or pathname */  
      dir char(*) varying,     /* directory if entry name  
                               above */  
      fileptr ptr,             /* returned ptr */  
      bit_length fixed bin(17), /* number of bits in segment */  
      error fixed bin(17);     /* error return */
```

Description of Arguments:

error is as returned from `sms$initiate`.
