### Identification

Print an ASCII file on the User's Console.

PRINTA SAVED

Art Evans

### Purpose

To print an ASCII file on the user's console, using the escape conventions appropriate to that console.

### Usage

The call

```
RESUME PRINTA NAME1 NAME2
```

is to be used to print the file NAME1 NAME2 on the user's console. The escape conventions used are those of EDA, as described in Section BE.5.07. PRINTA, like EDA, will use escapes appropriate to the console which the user is using.

PRINTA will respond to an interrupt signal by terminating (with CHNCOM).

### Method

The same conversion routines used in EDA are used in PRINTA, thus assuring that they are compatible.

PRINTA calls WHOAMI in the CTSS supervisor to determine the type of console the user is using, and produces escape codes accordingly.

The file PRINTA SAVED may be linked to in T234 CMFL01.
