Identification

Overview of Test and Diagnostic Documentation
Harlow E. Frick

Purpose

This document summarizes organization of the BR section.

Discussion

Section BR.1 contains a general description of the present off-line test and diagnostic system being used at prototype 645 installations. (This system is officially documented on GE drawing numbers.) All other BR sections describe a proposed test and diagnostic system which will apply to all 645 Multics installations. These sections may be categorized as follows:

Section BR.0.01 contains general test and diagnostic philosophy plus general design considerations related to on-line tests and diagnostics (i.e., tests and diagnostics which run under Multics at the same time the system is open to other users).

Section BR.2.00 contains a general description of the on-line test and diagnostic system.
