Subject: Obsolete Include Segments

Because >idd>include has filled up, we have attempted to identify all unused include segments and have moved them to >idd>include>obsolete. We used the include crossreferencer plus our knowledge of the system to identify potentially obsolete segments. However, I'm sure that some of the segments we have moved are really not obsolete.

We are therefore asking for your help in identifying the truly obsolete include segments. On the attached list, please circle any include segments which you feel are not obsolete, and draw a line through any segments which you are sure are obsolete. SIGN THE SHEET (so we can ask you about circled entries) and return it to:
