Identification
RING_0_PEEK
D. L. Stone

(Note that the following is an Abstract, which should be replaced by a full description at a later time.)

Function of Entry:

To move 1000(10) or less words from any segment to the ring 32 stack. This segment is in ring 0 and must be called through hcs_.

Calling Sequence for Entry:

call ring_0_peek(ptr_from,ptr_to,number);

Declaration of Arguments:

dcl (ptr_from,ptr_to) ptr,
    number fixed bin(17);

Description of Arguments:

ptr_from is a pointer to the information to be copied.

ptr_to is a pointer to the place into which to copy; This place must be in the ring 32 stack or no data transfer will take place.

number is the number of words to be moved; it must be greater than zero or no data transfer will take place.
